SPRAYTHANE 2000

HI-DEFINITION COLOUR

WHAT 2000 SPRAYTHANE HIGH GLOSS FINISH
WHERE PRIVATE HOME, GOLD COAST QLD

SPRAYTHANE™ 2000

The Finest Gloss Polyurethane Available. Bar None.

Spraythane™ 2000 Ideal Uses:

- PROJECTS THAT REQUIRE HIGH GLOSS AND RESISTANCE
- KITCHEN & BATHROOM CABINETRY
- CLEARS OVER TIMBER/ VENEER PANELLING
- SHOPFRONTS

The highest gloss and definition of image money can buy with laboratory-strength resistance.

Spraythane 2000 is a truly unique product that combines the deepest gloss and finest definition of image available with an enormous working temperature range, laboratory-strength resistance and the world's most sophisticated colour matching system into a product used throughout southeast Asia since 1997.

And if you're a designer or specifier, you'll love the range of colours – more than 40,000 electronically recorded and growing.

Super High Gloss with Resistance to Match

When comparing high-gloss finishes, definition of image (DOI) is the key. Spraythane 2000 delivers a stunningly undistorted DOI by a unique combination of ingredients and additives that "fit" seamlessly to offer an unobstructed gloss finish. Colours appear deeper and more brilliant. Reflections are crisp and sharp.

In addition to the good looks, Spraythane 2000 exhibits extraordinary resistance to chemicals and scratches once cured. Ideal for kitchen and bathroom cabinets, as a protective topcoat over timber (Spraythane 2000 Clear), or as a durable finish for shopfronts and commercial interiors.

Designed for All Temperatures

Think weather and working conditions would affect where the product can be used? Think again. Spraythane 2000 was initially designed and exported to manufacturers in southern China (not to mention tropical Queensland) to perform in their extremes of heat and cold.

Combine these design requirements with three Part B hardeners for optimal spraying conditions regardless of the temperature, and you have a product that is effective from just under 10°C to 40°C and high humidity.

High Definition Colour

Need a high-gloss colour? You cannot go past Spraythane 2000.

The Gloss only finish (100% gloss level) offers high definition colour at curing times and user-friendliness that other can only dream of.

Other finishes including Satin (55-65%), Matt finishes (25-35%) and textures are available in Spraythane 850 and the GLOBAL family of finishes.
