CARING FOR YOUR POLYURETHANE KITCHEN

QUICK TIPS

- USE A MICROFIBRE CLOTH TO QUICKLY REMOVE PRINTS AND SMUDGES WITHOUT CHEMICALS
- MOST CLEANING CAN BE DONE WITH WARM SOAPY WATER
- NEVER USE ABRASIVE CLEANERS AS THEY RUIN THE SURFACE!

Congratulations on your new polyurethane kitchen!

Polyurethane is a highly durable and prestige choice for kitchen and bathroom cabinetry. It not only looks great, it is exceptionally resistant to such things as moisture and staining. When properly cared for, these surfaces can last for many years.

In order to ensure your new polyurethane kitchen looks this great well into the future, please take note of the following recommendations while cleaning polyurethane surfaces.

Recommended Cleaners

Light Cleaning: To enhance gloss and remove fingermarks and handprints, we recommend using a 3M High Performance Cloth or similar microfibre cloth. This will maintain a chemical-free pristine finish.

General Cleaning: All but the most stubborn stains can be removed by using mild detergent, warm water and a lint-free (preferably microfibre) cloth. If this method is insufficient, we recommend Spray & Wipe (or an equivalent product).

Stubborn Stains: Stains that are difficult to remove may be cleaned using Spray & Wipe or an equivalent cleaner. Under no circumstances should an abrasive cleaner (or abrasive cloth or scourer) be used on polyurethane surfaces.

CAUTION!!!

DO NOT USE ABRASIVE CLEANERS ON POLYURETHANE SURFACES. Abrasive Cleaners (such as Gumption and Jif) will strip the surface of gloss and instantly deteriorate the finish.

Whilst polyurethane surfaces are generally resistant to solvents, we also recommend against using solvent-based products when cleaning.
